CLAIRVOYANCE
Many Projects, One Dashboard

The foundation for data-driven intelligence in R&D Project Portfolio Investment Decisions

Data backed portfolio metrics can be transformative for R&D portfolio decision-makers as it ensures long-term profitability and balances strategic alignment. Efficiently managed project data can provide crucial financial and operational metrics such as project delivery milestone dates, development cost forecast, revenue forecasts, Probability of Technical and Regulatory Success (PTRS), etc.

However, life sciences companies are facing challenges such as data silos, data complexity, and data disparity. They are trying to fill the gap either by deploying a point solution or custom build projects. Although point solutions can give immediate relief, they may not be robust enough to scale and adapt to new challenges. Even though custom solutions are tailor-made, the timelines surrounding do not persist long enough to deliver a robust solution. Must companies compromise either on control or customizability? Not really, when there is a way to have the best of both the worlds!

Overview of Clairvoyance

A custom Executive Dashboard Application tailored specifically for the pharmaceutical industry. This application offers a consolidated view of the project portfolio, providing higher-level executives with a powerful tool for data-driven decision-making.

It automates data aggregation and projects crucial portfolio metrics and project data all in one consolidated dashboard.

One Dashboard to turn every risk into an opportunity

A solution that can leverage life sciences data to generate crucial portfolio metrics needs to fulfill certain requirements, such as

Provide **quality data** with transparency

Scalability and agility to quickly add new sources and adopt to increasing data volumes

Long-term viable technology which evolves along with the market needs

Strong security from external threats yet provides full control to internal users

One Solution to Solve your Data Analytics Pain Points
Clairvoyance Differentiators

★ Easy to adopt
★ Rapid time to market
★ Automatic data aggregation and reports
★ Customized alerts and notifications

Clairvoyance is packed with industry ready features along with a faster time to market implementation timelines.

> 200%
Increase in data accuracy and alignment

> 80%
Improved confidence in reports

50 hrs/ month
Increase in productivity of portfolio decision makers through automation of data aggregation and reporting

Significantly improved
portfolio investment decisions

Business Benefits of Clairvoyance

🕐 Saving time and resources

Automated data aggregation and report generation allows decision makers to focus on strategic initiatives rather than administrative tasks.
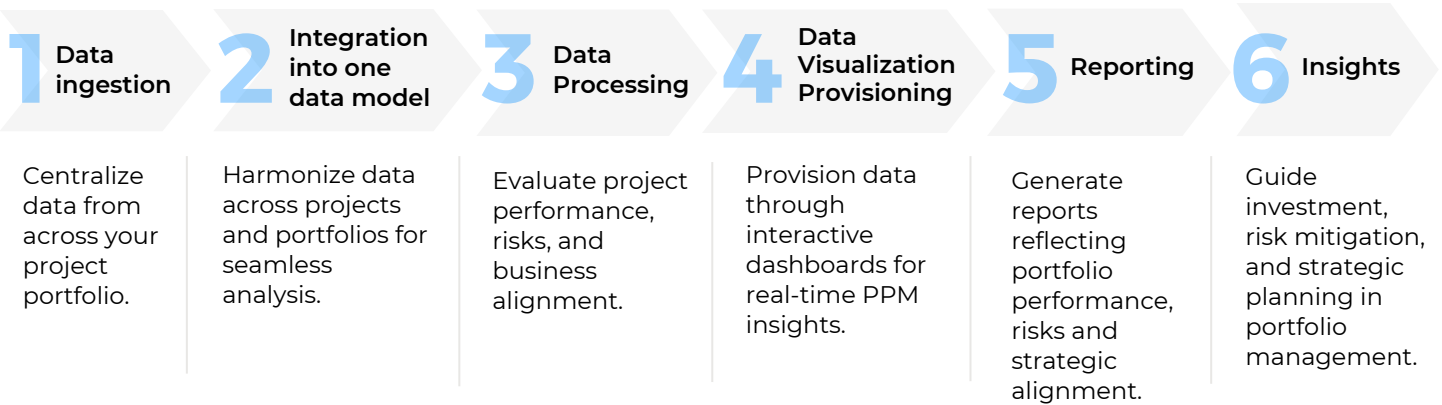

👥 Greater transparency and accountability

Access to real-time project data leads to fostering a culture of accountability and transparency within the organization.

⚙ Scalability & future-ready

Designed to scale with your growing portfolio with easy adoptability to additional metrics or features as needed.

The Clairvoyance Advantage

- ✓ Fully customizable
- ✓ Secured solution architecture
- ✓ Shorter time to market
- ✓ Tremendous scalability potential

Clairvoyance Process Architecture

The journey from data to dashboards

1 Data ingestion

Centralize data from across your project portfolio.

2 Integration into one data model

Harmonize data across projects and portfolios for seamless analysis.

3 Data Processing

Evaluate project performance, risks, and business alignment.

4 Data Visualization Provisioning

Provision data through interactive dashboards for real-time PPM insights.

5 Reporting

Generate reports reflecting portfolio performance, risks and strategic alignment.

6 Insights

Guide investment, risk mitigation, and strategic planning in portfolio management.

Data Integrations

Clairvoyance can seamlessly integrate your project data from

- Excel uploads
- Data exports/imports
- Internal databases
- Third-party applications
